

PATIENT INFORMATION SILOS

The disconnect between health infrastructure
and the patient experience.

Project Submitter: Gareth Digby

The Patient is Still the Messenger

Despite digital advances, patients must manually 'hand-carry' history between providers. Transposing this data leads to errors, omissions, and dangerous gaps during time-critical care.

MANUAL TRANSFER POINT

The Infrastructure Exists

25 Billion

Data exchanges
annually

70,000

Medical Groups

75%

of US Hospitals
Connected

300+ Million

Patients Supported

A Network of Networks: Connecting Federal Agencies,
State HIEs, and Private Sector Providers.

The Toolkit: Standardization & Access

190 Million+

Patients empowered to get and stay healthy via MyChart.

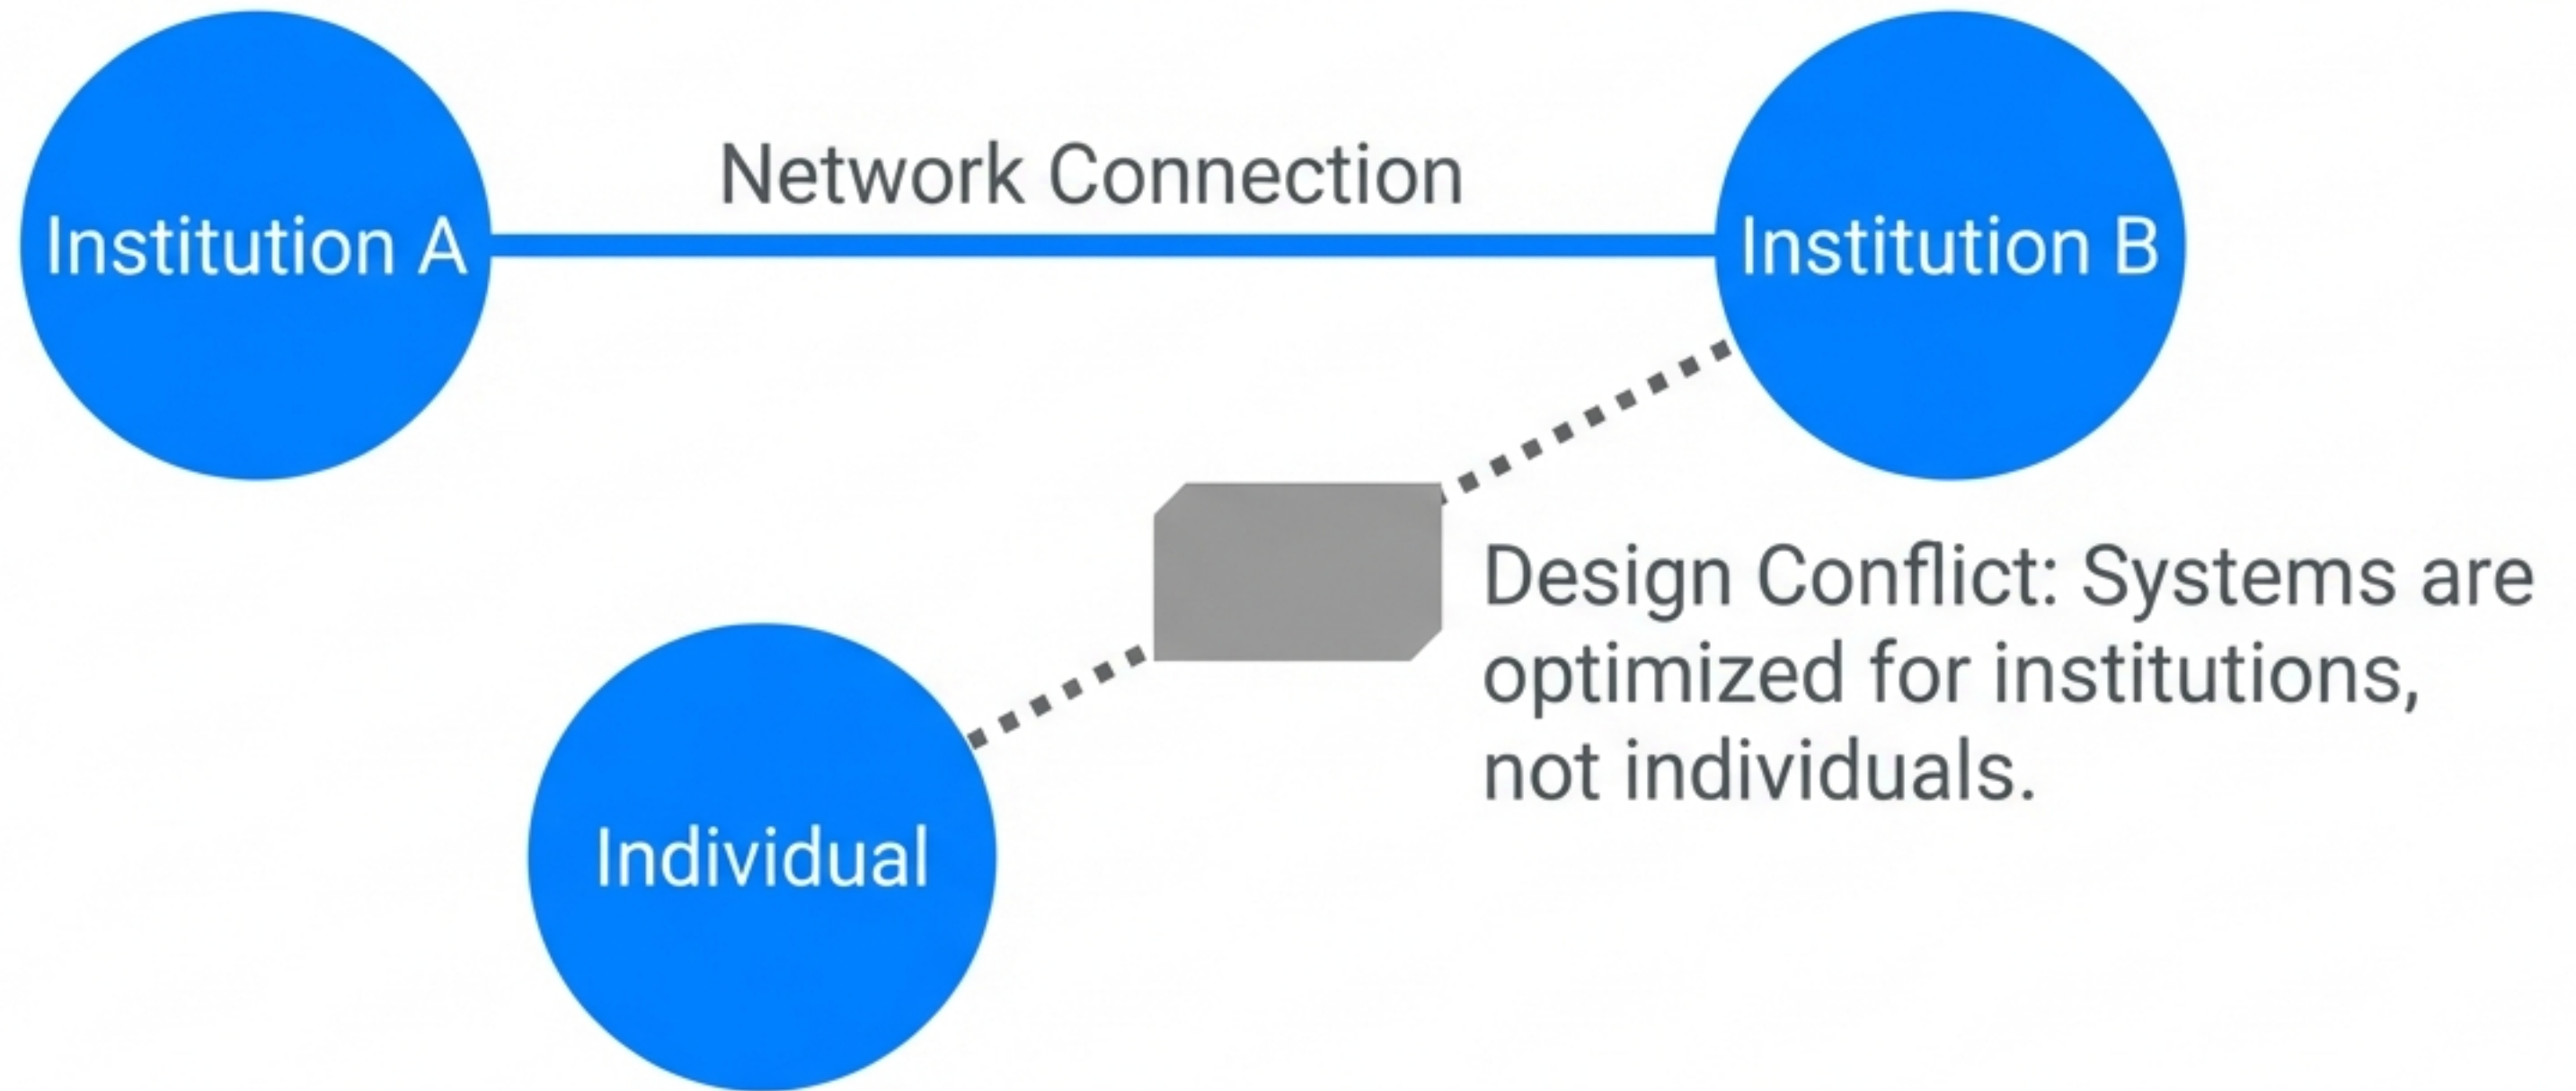

Universal Language

R4: Well established globally.

R6: Expected 2026.

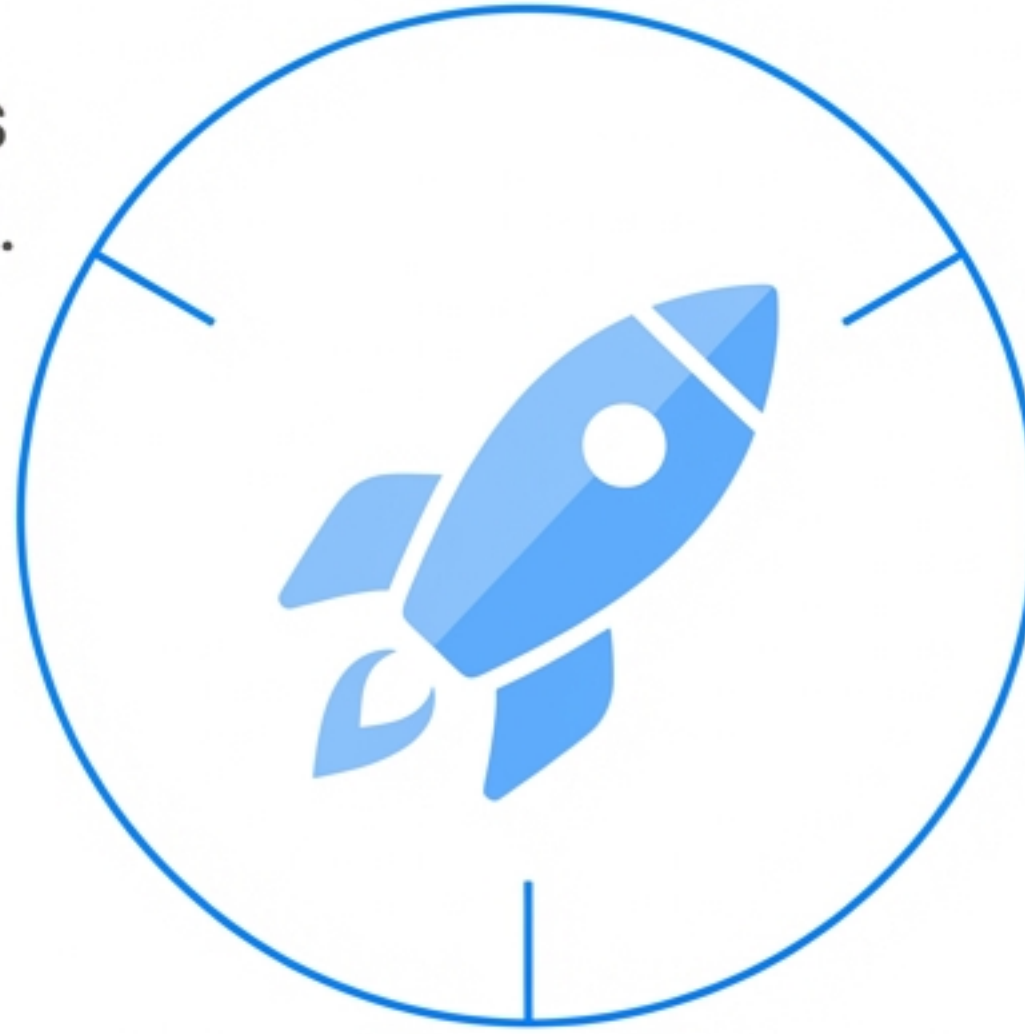

Why the Silo Persists

Reality: Data does not follow the patient.
The patient must bridge the gap.

Shifting Control to the Individual

Empower individuals
to hold their own keys.

Accurate, timely
information transfer.

Improved healthcare
outcomes.

The Goal: Moving from institutional control to individual agency.
